Press-Announcement

Launch ERS EMpTy 250 v2.0 For MAC

On the 11th of April 2011 Empty Room Systems releases their Mac versions of the EMpTy 250 reverb. The reverb, under the name EMpTy 250 software reverb, is a downloadable tool you can buy on the website www.emptyroomsystems.com. EMpTy Room Systems is a producer of audio processing software from the Netherlands founded in April 2009.

The original EMT-250, the reverb is based on, audio lovers praise for its warm and lush reverb. ERS identified its specifics and reinvented the sound in a modern technology tool. The warm welcome of the pilot and enhancing quality since, now results in this new commercial release.

Through a simple concept download –and-pay-plug in-and-play, the reverb can be used in all the common programs that support the VST and AU format like Nuendo, Cubase, Logic, Reaper etc. The Mac version uses the iLok protectionscheme and will need the iLok dongle. Updates that will follow, will need the second generation iLok.

RTAS format for MAC and PC is currently under development.

The reverb, will be available for purchase on 11th of April 2011. We will also provide a limited functional demo. On our web-site several wave-files will be available, showing the sound of this updated plug-in.

For new costumers it is available for € 129,-- at the webshop of www.emptyroomsystems.com.
